

Heatmap

Description

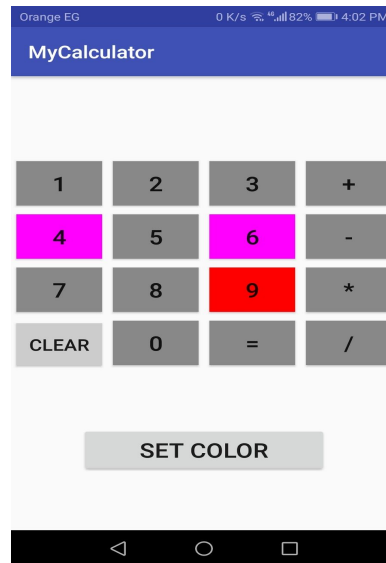

- This is an Android application that provide a heatmap of a Calculator.

Usage

- When the user opens the application this screen opens at first

- Then the aim is to let the user uses the calculator normally and while the user uses the calculator the screen will be colored like this.

- If the user want to change the colors of each level the user will click on set color button and a new page will open

- Then user should click on the preferred colors and when finished the user should click on the Back button.

Purpose

- *The purpose of the heatmap in this application is to show the developers what does the user uses more frequently and what the user doesn't use often.*
- *So the developers based on this data can develop a UI that is easy and attractive for the users.*
